Investment Distribution: District-Wise and Sectoral Breakdown of Holdings

In summary of the provided graph, I categorized the months into four distinct seasons.

Summer, Monsoon , Winter, Autumn

The highest-invested sectors were identified based on their investment amounts. Among these, the sector that garnered the highest investment was real estate industrial parks and IT buildings, and this was particularly prominent during the autumn season. Consequently, during autumn, this sector received the majority of its investments.

Across various industries, investments were predominantly concentrated in either the autumn or winter seasons. Conversely, during the monsoon season, the lowest investment was observed across different sectors. From this analysis, it becomes evident that many sectors directed their investment focus towards autumn or winter, likely due to the favorable weather conditions in these periods within various industries.
